Banner - PowerFAIDS Integration Suite

ThreeForks, Inc is pleased to offer users of College Board's PowerFAIDS™ student financial aid management system and SunGard's Banner™ student administration system a full suite of bi-directional integration tools. These tools are designed to provide your college with a near seamless integration of PowerFAIDS into Banner.

What is ThreeForks Banner - PowerFAIDS Integration?

Visualize data arriving where you need it, when you want it, and without your intervention to format and load it into your respective systems. That is how a successful integration program works for you. ThreeForks has worked for the past nine years with a group of Banner and PowerFAIDS colleges to make this vision a reality. Now we are able to offer it a broader community.

ThreeForks integration suite gives you the best of both systems – PowerFAIDS superior tools for document tracking, institutional needs-analysis, packaging and awarding financial aid; and SunGard's superior admissions, student and student accounting system as well as HR, Finance and Payroll systems.

What does ThreeForks include?

The tool suite is made of two main utility programs: one to import data from Banner into PowerFAIDS and the second to import data from PowerFAIDS into Banner. Within each of these utility programs are a set of functions which allow the Financial Aid Administrators to tailor their import processes to the regular business processes of your college or university.

In addition ThreeForks can offer SPUR - a single point user resolution program which integrates PowerFAIDS Net.Partner™ into your Luminis™ student portal experience.

PF_Banner **Data Import Functions**

- Demographic Data Load
- Admissions / Applicant Data Load
- Student Academic Level Data Load
- Registration Data Load
- Satisfactory Academic Progress Load
- Student Employment Data Load
- Exemption Load
- Payment Reconciliation Processes

PFXTrans **Data Export Functions**

- Exemption Processing
- Memos Allocation
- Grant Aid Payments
- FFELP Loans (EFT) Payments
- Direct Loan Payments

SPUR **Single Point User Resolution**

Luminis™
Net.Partner™

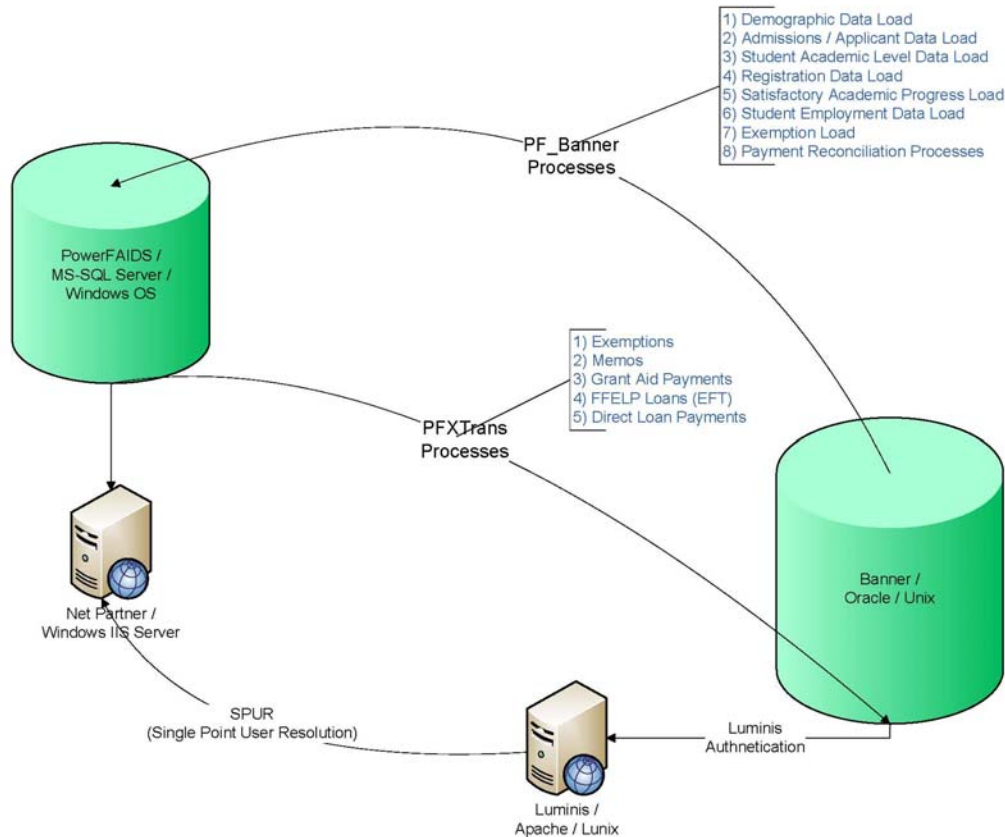

How does ThreeForks make it work?

ThreeForks tool suite leverages standard API's and functions built into both Banner and PowerFAIDS to move data between systems. The tools are designed to be user configurable to adapt to how your institution does business allowing for changes in your processes over time. In the

ThreeForks, Inc.

middle ThreeForks uses sophisticated data comparison algorithms to minimize the flow of data to just the elements that are changed on one system or the other.

What else can ThreeForks do?

Beyond these standard integration points provided between Banner and PowerFAIDS ThreeForks can provide custom programming to enhance the functionality of either of these systems to meet specific needs. ThreeForks has written a number of custom bi-directional interfaces to support state grant processing in both Banner and PowerFAIDS. We have also created tools to integrate in house student employment systems into Banner. We would enjoy an opportunity to discuss your unique business processes and how we can write tools to meet those needs?

How do I get more information and pricing?
